

Utilizing Microsoft Power BI for Case Work, Task Forces, and Organized Crime Investigations

Chris Chevallier, PhD
New York City Police Department
NY NJ HIDTA

Background

Trinity College Dublin
Coláiste na Tríonóide, Baile Átha Cliath
The University of Dublin

- **Historical Geography and GIS**
- **Bias / Discrimination Research**

- **GIS Administration**
- **Power BI Development**

ESRI application and Power BI development for task forces and criminal intelligence

What is Power BI?

Versatile

- Scalable: From cleaning files locally to supporting a Department with a 30 page report
- No Coding vs Utilizing DAX, Python, and R
- Customizable canvas
- Designed for a variety of skill levels
- Automating tasks and reports, as well as continuous monitoring of trends
- Doesn't have to be limited to visualization
- Refresh on demand vs Direct Query
- Various means of setting permissions
- Link to internal systems, Cloud Systems, photo managers

Reliable and Evolving

- Continuous opportunities to grow and train
- Easy to copy, version, restore, and transfer
- Receives monthly updates
- Large pool of training resources and user communities

Data are available for download at the [NYC OpenData](#) site.

Incidents by Month

Count of Force Incidents by Precinct*

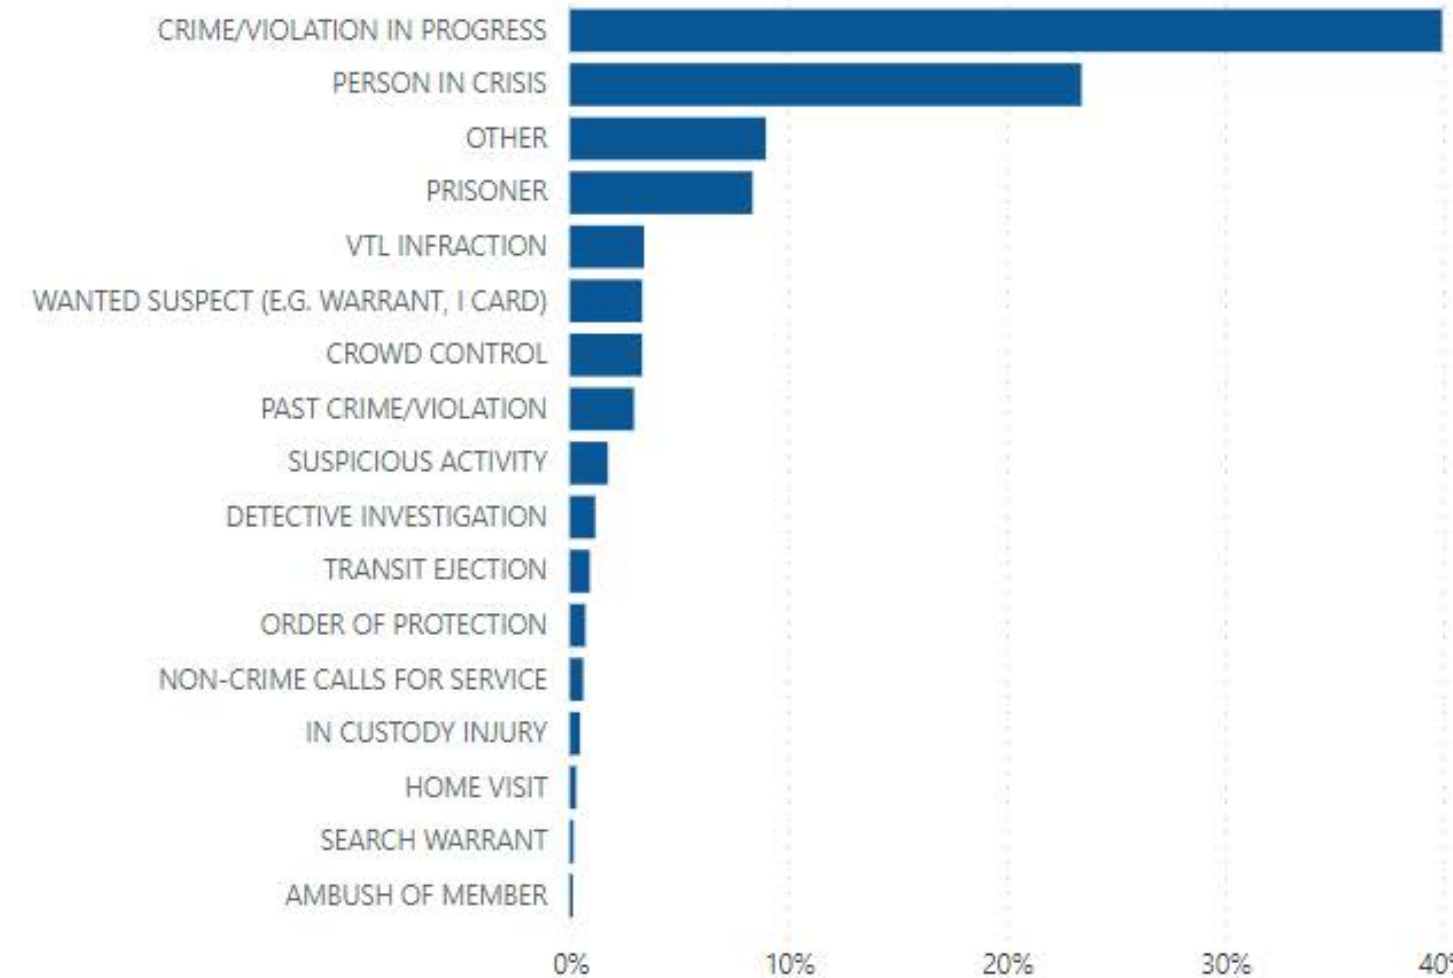

* Precincts shaded in gray have zero incidents

Type of Force

Basis for Encounter

Ethical Considerations

- Database creation and criminal group association
- Predictive algorithms vs optimizing analysis
- Educating your users about inferences or limitations of the data (add text boxes)

Applied Uses

The Full Picture

Power BI is designed to handle large volumes of data, allowing creators to import entire criminal histories for sets of subjects without experiencing lag. Users then have the option of focusing on recent events (Year to Date Initial View) or evaluating all available data.

Monitoring

Filters remain in-place after exiting, allowing users to focus on data just for subjects they're responsible for. This helps eliminate issues caused by perps being arrested outside an area of responsibility or if there's a failure to notify. It also saves time and energy.

Alerting

Depending on licensing and user roles, automated alerts can be established based on custom rules (e.g. a crime spike or increase in a particular criminal group's activity)

Meeting Ground for Collaboration

"Potluck" of data

Work with DA Offices to version a product and filter out data to avoid discovery issues

Every visual and page can have unique and precise filters

Controlled access to a limited pool of data can help mitigate IT Security concerns

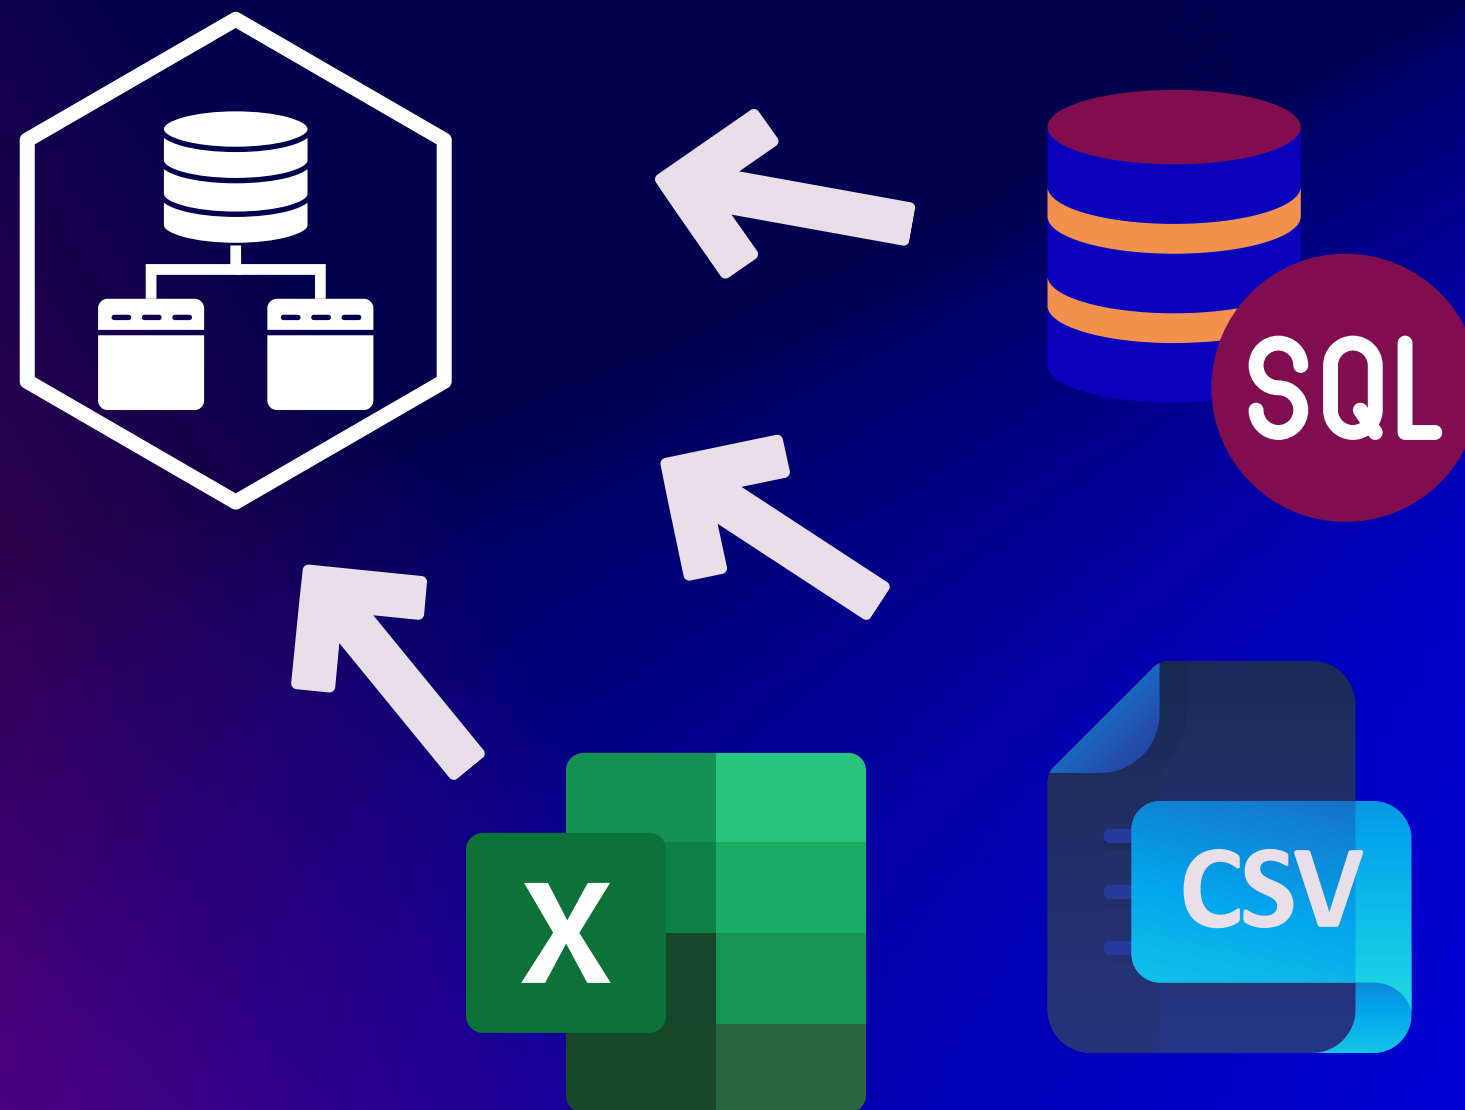

Navigate interagency account creation issues

"Frankenstein's Monster"

Not just a meeting ground of agencies, but of data

Different file types and refresh rates

Where data from disparate parts of a warehouse can be joined

One to Many / One Directional Relationships

Master Table

Uniform Subject, Analyst, and
Criminal Group Filters

Multiple datasets on one
page that can be queried
or sliced simultaneously

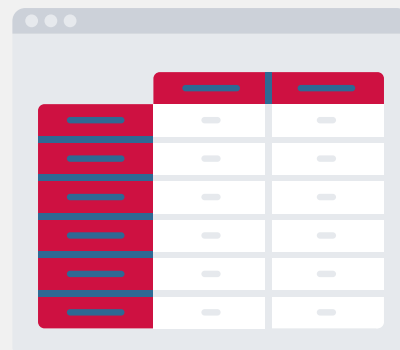

Single Option Summary Pages for
Subjects, Criminal Groups, and
Analyst Target Sets

One page: mini-maps for residences, arrest locations,
complaints, and suspected activity, alongside tables
with the incident details and charts to count types of
activity (e.g. arrest charges for a gang)

Launching pad for criminal investigative analysis and
geographical profiling

- Parole
- Probation
- Social Media
- Phone #s

Landing Page with an overview
of contents and contact
information

Instructional Page with
embedded photos

Morning Briefing Page

Specialized pages focusing on singular
datasets

Subject, Analyst / Team, and Criminal
Group Summary Pages

Prioritize a few key pages, the remainder are for in-depth
analysis

Tooltips

- Saves processing power
- Expand on limited space
- Reduce rows per table (e.g. a tooltip for one complaint giving the details for two associated arrests)
- Can be created for maps as well (e.g. choropleth maps can have point maps as a tooltip or point maps can have a tooltip that's a mugshot and arrest narrative)

Incident Narrative

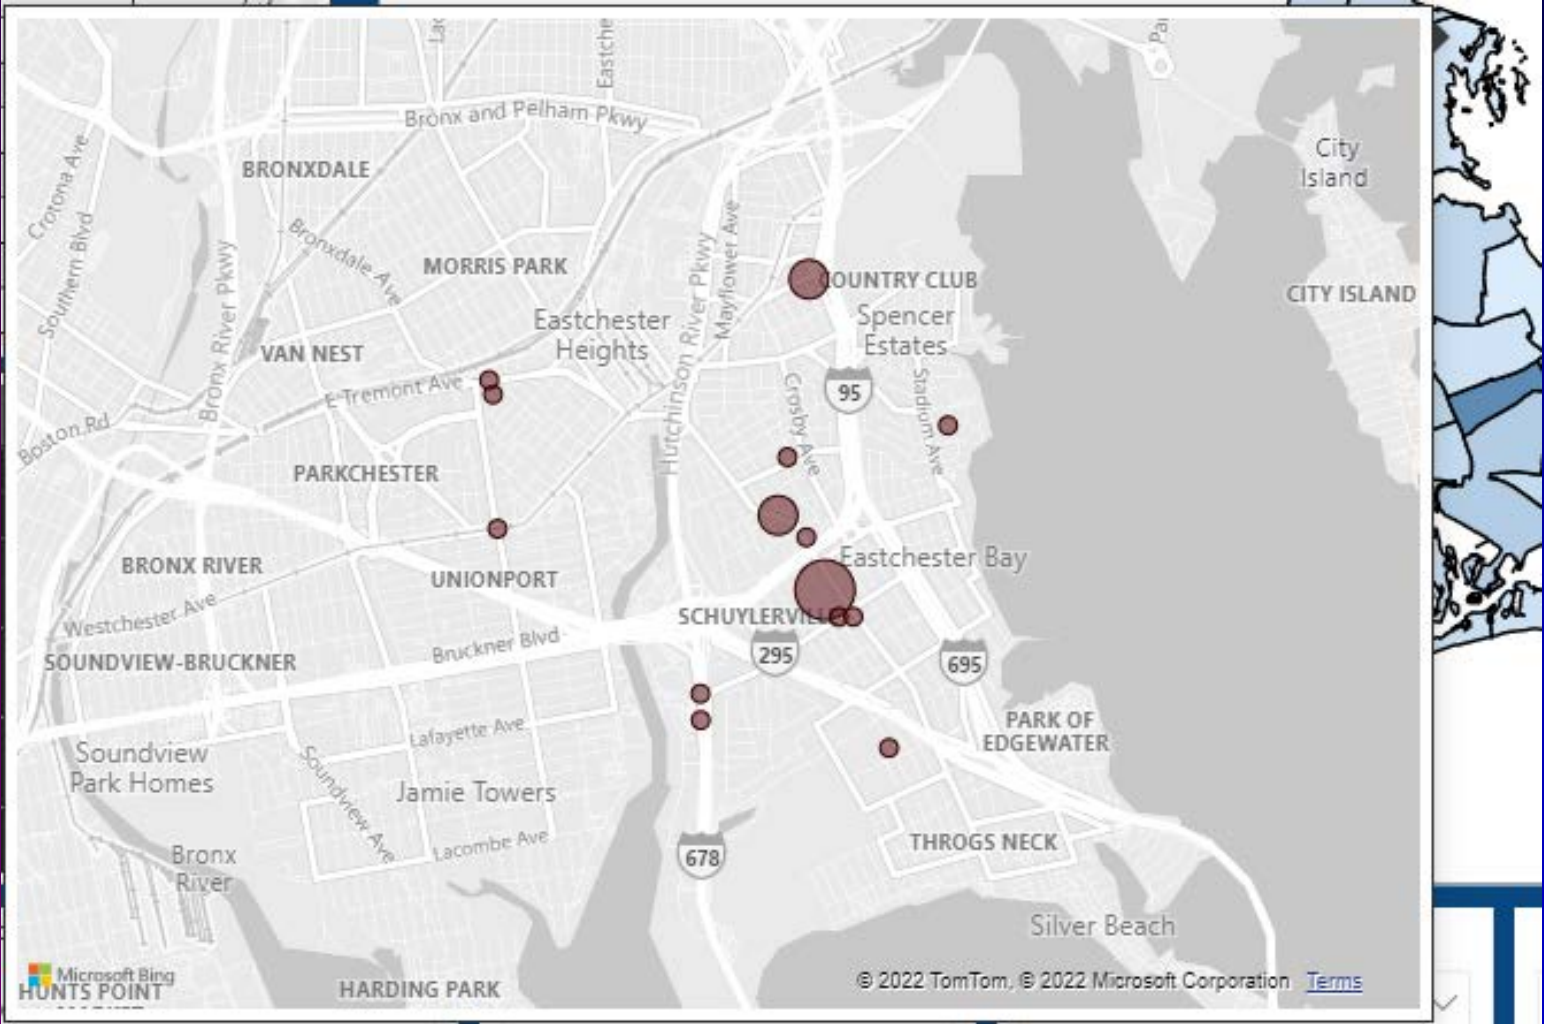

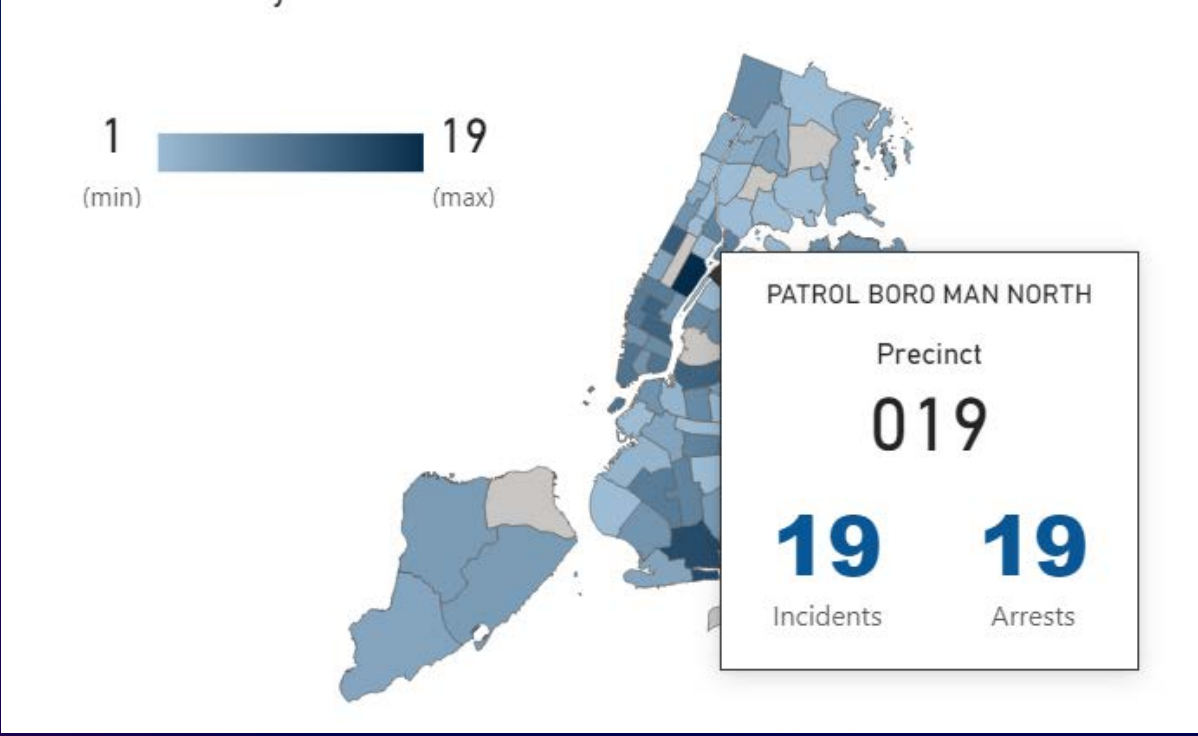

Firearm Data

Vehicle Information

Evidence and
Property Vouchered

Mapping Overview and Tips

Shape Maps

- Turn a shapefile into a TopoJSON to create custom choropleth maps
- <https://mapshaper.org/> is useful for generating this type of JSON

Point Maps

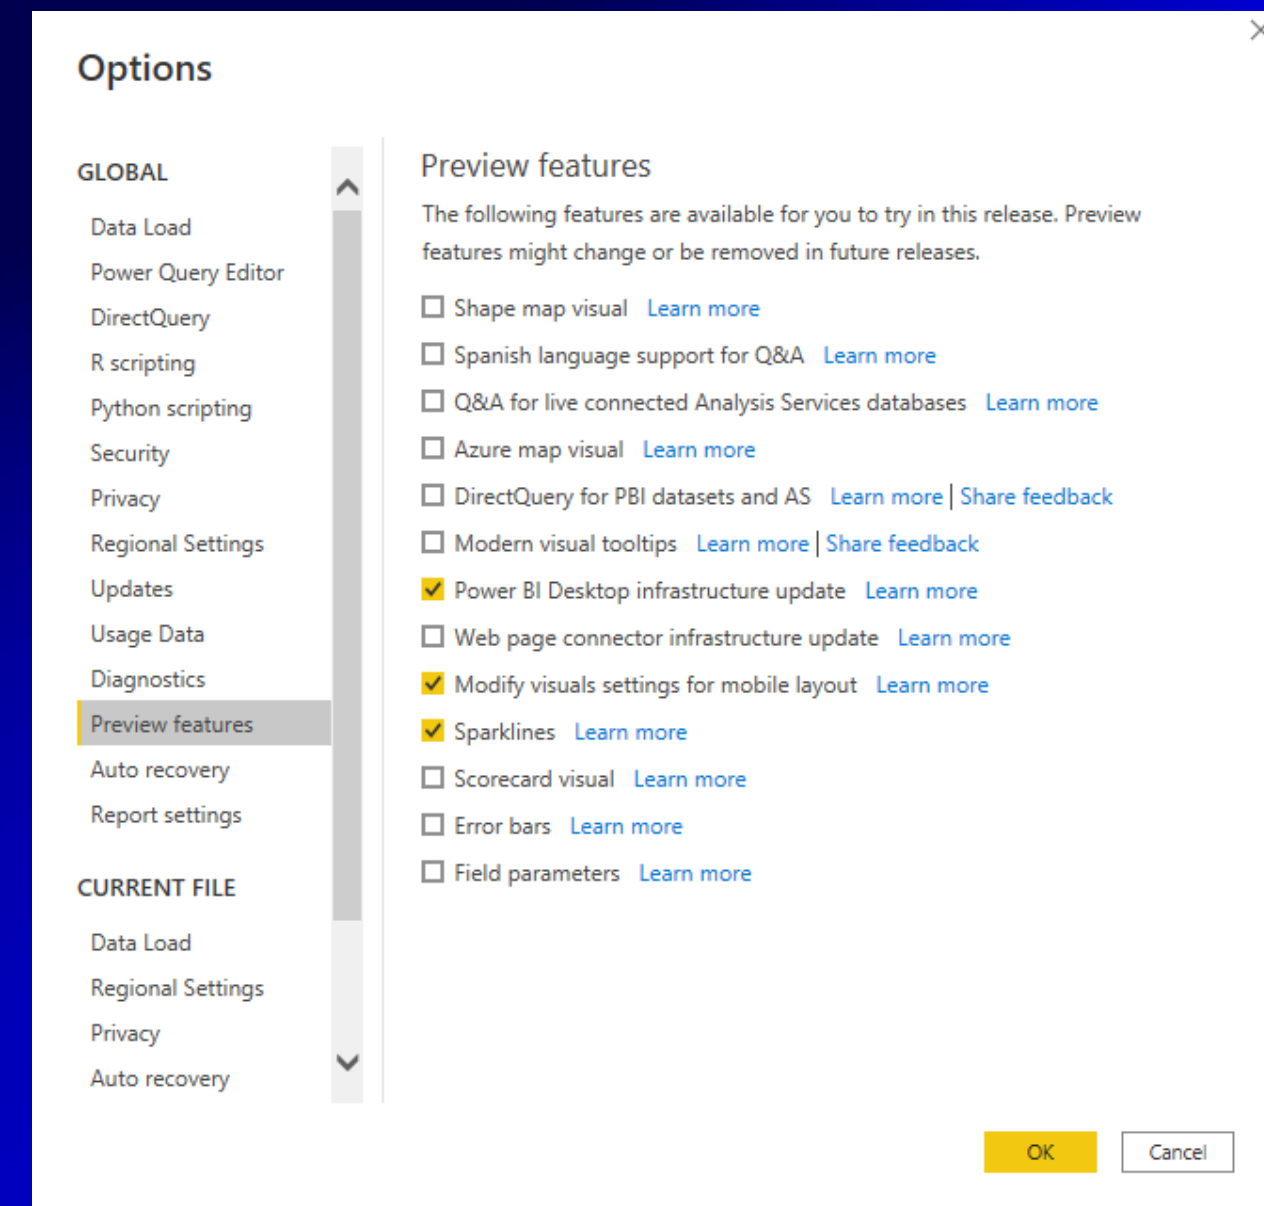

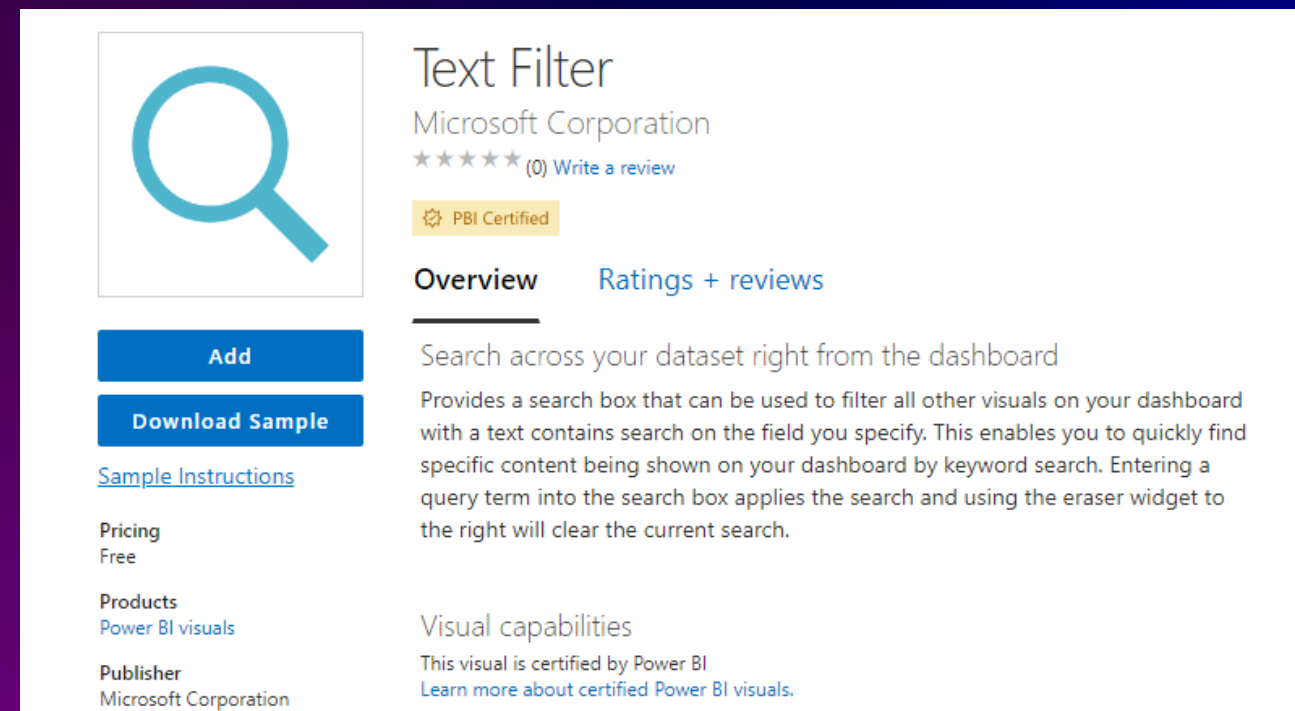

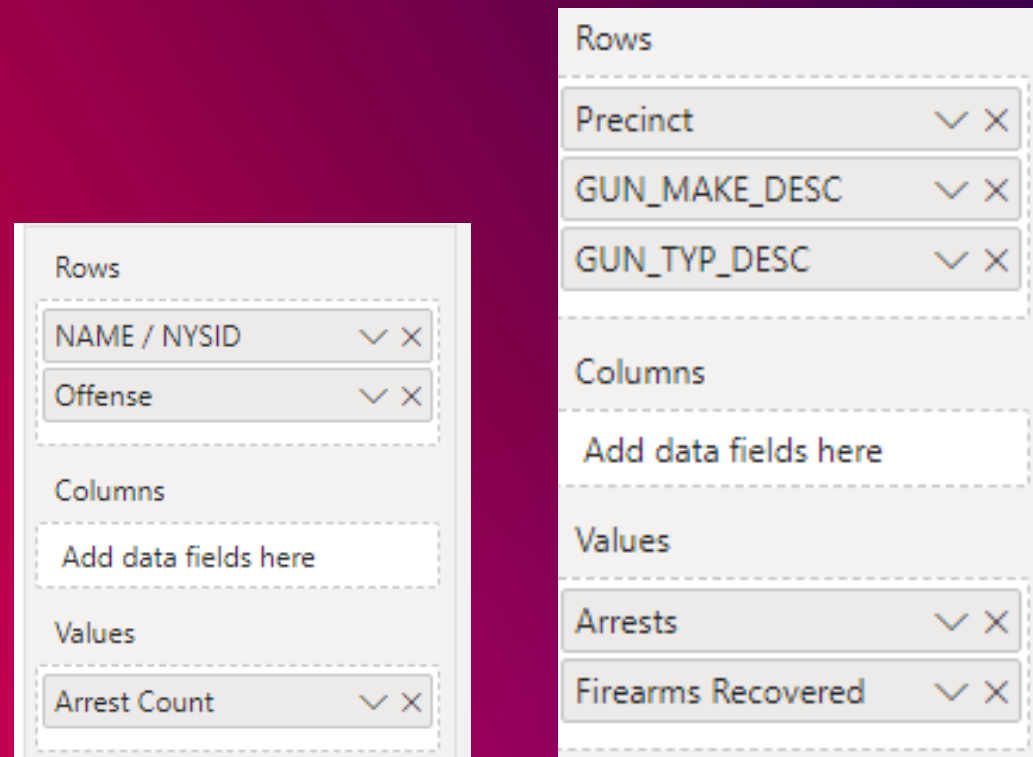

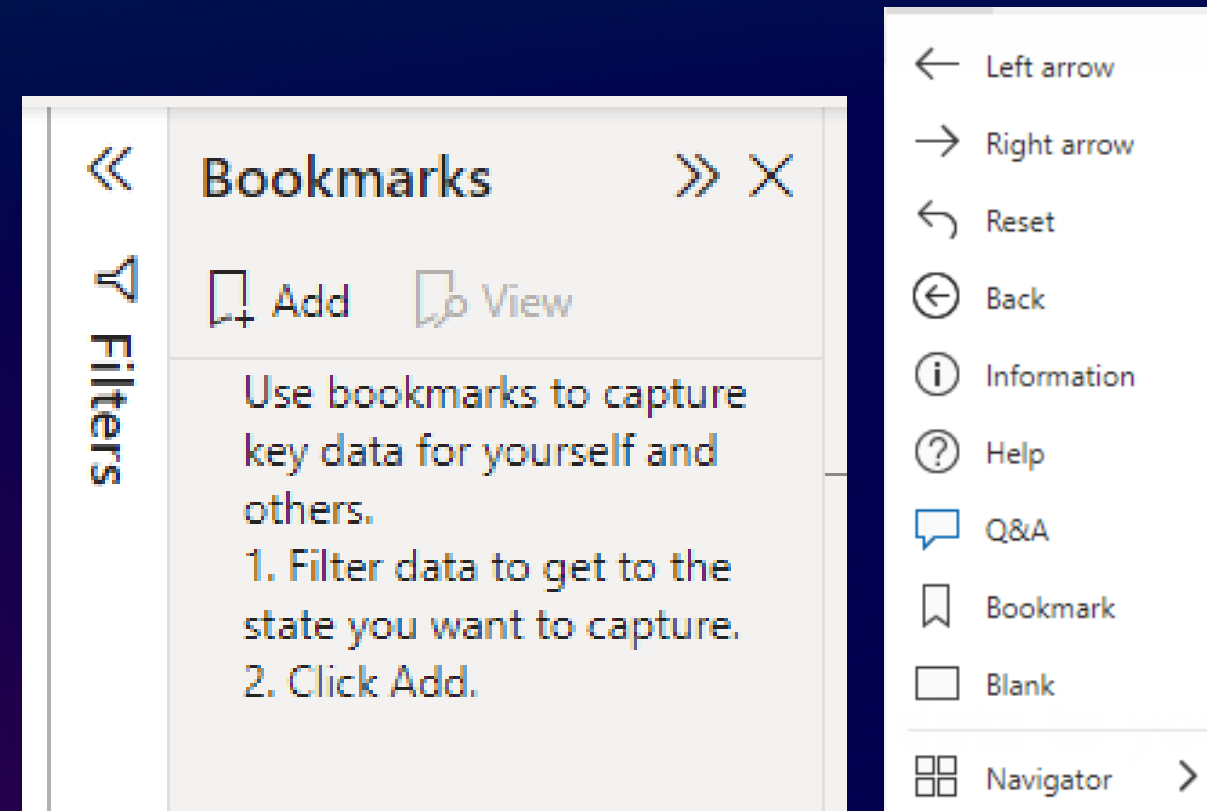

- Limited to one set of coordinates or field of addresses
- Despite this limitation, the maps are powerful and render/slice quickly
- One way around the one layer issue is to create a new table within the data model that pulls coordinates from different datasets
- You run the risk of points stacking on one another (e.g. two shootings at a housing development), but tooltips can be used to remedy this
- The Azure Mapping visual also exists, but may be restricted by your organization due to its geocoding practices
- Hidden street viewer feature

ArcGIS Maps

- Cannot fully customize the tooltips
- Benefits from tools, such as drive time calculations
- Pulling down reference layers from your organization's portal is very useful (e.g. referencing sexual assaults against the residences of registered offenders)
- The visibility of ArcGIS layers is still tied to group permissions

Tips and Tricks

- Use Bookmarks for CompStat Views
- Enable Feature Previews
- Import custom widgets, especially the Text Filter
- Add multiple rows to a matrix visual to enable drill downs and save space
- Have a reset button unique to every page
- Hide less frequently used slicers with a pop out slider or Navigator
- Make use of Focus Mode
